Assignment - 1

AWS cloud infrastructure

(A) Regions: AWS operates in multiple geographic Regions worldwide (eg Asia Pacific, US East etc).

each Region has is a separate geographic area consisting of multiple Availability Zones

(B) ~~Availability~~

(B) Availability Zones: Each Region has multiple AZ (3 or more)

an AZ is one or more discrete data centers with redundant power, networking & connectivity.

(C) Edge locations :- Edge locations are AWS content delivery endpoints for Cloudfront (CDN) & Lambda edge

(D) Wavelength zone : AWS wavelength infrastructure deployment that embeds AWS compute and storage service within telecommunication providers' 5G network, reducing latency for mobile & edge locations.
